A. Introduction

This document sets out the Luxembourg Implementation Guidelines for the Customer Direct Debit Initiation message ISO 20022 XML – “pain.008.001.02”.

The purpose of these Implementation Guidelines is to provide guidance on the use of the SEPA Direct Debit Initiation Message sent to banks in Luxembourg.

These guidelines for SEPA Direct Debit Initiation are compliant with the SEPA Business-to-Business Direct Debit Scheme Customer-to-Bank Implementation Guidelines v7.0 and the SEPA Core Direct Debit Scheme Customer-to-Bank Implementation Guidelines v9.0 of the European Payments Council.

The version 1.3 can be used as of 20/11/2016.

These Implementation Guidelines have been developed by ABBL (Luxembourg Bankers' Association) and are greatly inspired by the Febelfin one.

The utmost care has been taken to make sure the information in this publication is correct. However, ABBL by no means can be held liable for any loss or damage incurred due to any incorrect or incomplete information mentioned in this publication.

Please contact your bank for any further information.

i. SEPA Direct Debit definition

A SEPA Direct Debit is a payment instrument for making collections in Euro throughout SEPA from bank accounts designated to accept collections.

Transactions for the collection of funds from a Debtor's account with a Debtor Bank are initiated by a Creditor via the Creditor bank as agreed between Debtor and Creditor. This is based on an authorisation for the Creditor and the Debtor Bank given to the Creditor by the Debtor for the debit of its account: this authorization is referred to as the 'Mandate'. The Debtor and Creditor must each hold an account with a bank participating to the SEPA Direct Debit scheme.

Both Core and Business-to-Business European Direct Debits are described in this document.

The SEPA Core Direct Debit Scheme is intended for collections where Debtors are consumer or non-consumers entities.

The SEPA Business-to-Business Direct Debit Scheme is intended for business collections where Debtors may only be business entities.

Both recurrent and one-off collections can be processed.

Recurrent Direct Debits are those where the authorization by the Debtor is used for regular Direct Debits initiated by the Creditor.

One-off Direct Debits are those where the authorization is given to initiate only one single Direct Debit, authorization, which cannot be used for any subsequent transaction.

ii. Message Coverage

The Customer Direct Debit Initiation message is sent by the initiating party to the creditor agent. It is used to request bulk collections of funds from one or various debtors' accounts in favour of a creditor. The Customer Direct Debit Initiation message can contain one or more Direct Debit instructions. The message can be used in a direct scenario, which means that the message is sent directly to the creditor agent. The creditor agent is the account servicer of the creditor.

The message can also be used by an initiating party that has authority to send the message on behalf of the creditor. This caters for example for the scenario of a payments factory initiating all payments on behalf of a large company.

The Customer Direct Debit Initiation contains MandateRelatedInformation, i.e. extracts from a mandate, such as MandateIdentification and DateOfSignature. The customer Direct Debit Initiation message must not be considered as a mandate.

iii. Use of these Guidelines

Each item of the Direct Debit Initiation message refers to the corresponding index of the item in the ISO 20022 Message Definition Report for Payment Standards – Initiation. This Report can be found on www.iso20022.org, under “Catalogue of ISO 20022 messages”, with “pain.008.001.02” as reference.

Any gaps in the index numbering are due to the fact that some message elements of the XML message are not supported. The occurrences of a message element (mandatory/optional) can also show a difference between these guidelines and the ISO 20022 XML Message Definition.

For the Luxemburg banking community, message elements not described in these guidelines must not be used and the usage rules must be followed in order to avoid the possibility of the message or payment being rejected or data being ignored. If a message element is used whereas it is forbidden or not described in this document, this message element is ignored.

Some optional elements could be mandatory for some banks. Please contact your bank for any further information.

The description of each message item contains:

Index	Number that refers to the corresponding description in the ISO 20022 Message Definition Report for Payment Standards – Initiation
Definition	This contains the definition of the message block or element
Usage	Additional info how this element must be used
Xml Tag	Short name that identifies an element within an XML message, that is put between brackets, e.g. <InstdAmt> for Instructed Amount
Occurrences	<p>This indicates whether an element is optional or mandatory and how many times the element can be repeated. The number of occurrences is shown in square brackets</p> <p>For example:</p> <p>[0..1] shows that the element can be present 0 times or 1 time. The element is optional</p> <p>[1..1] shows that the element must only be present 1 time. The element is mandatory</p> <p>[1..n] shows that the element is mandatory and must be present 1 to n times</p> <p>An element, that is part of a block of elements, is mandatory as far as the block it is part of, is present in the message.</p> <p>If only one of several elements may be present, this is indicated by {OR ...OR} before the elements concerned.</p>
Level	Gives the place of the element in the XML tree.
Format	This specifies the values and format allowed. Remark: if a tag is used, the correspondent data field must not be left empty. At least one character has to be filled in.
Rules	Any specific rules that could impact the presence or the values of an element.

iv. Character Set

The UTF8 character encoding standard must be used in the XML messages.

The Latin character set, commonly used in international communication, must be used. It contains the following characters:

abcdefghijklmnopqrstuvwxyz

ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789

/-?:()., '+

Space

Remark: Some text fields (e.g. MessageIdentification, InstructionIdentification, ...) may be case-sensitive, except MandateIdentification and CreditorIdentification. Please contact your bank for any further information.

v. Message Structure

The description of the XML document models can be found in a number of schemes. A specific description language (XSD) is used in those schemes. The schemes make it possible to give a description of the tags in the document, the structure and sequence of those beacons (hierarchy of tags) as well as the codes which are allowed for some specific data, the number of possible cases, the obligatory or optional character of some of the data, etc.

The general XSD for pain.008.001.02 can be downloaded from www.iso20022.org > Catalogue of XML Messages > Payments > Payment Initiation > CustomerDirectDebitInitiationV02

A file containing an XML- pain.008.001.02 message has the following structure:

```
<?xml version="1.0" encoding="UTF-8"?>

<Document
xsi:schemaLocation="urn:iso:std:iso:20022:tech:xsd:pain.008.001.02
pain.008.001.02.xsd"
xmlns="urn:iso:std:iso:20022:tech:xsd:pain.008.001.02"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">

    <CstmrDrctD
        btInitn>
        message
        content...
    </CstmrDrctDbtInitn>
</Document>
```

A file must contain one single <Document> tag (envelope), which contains one single <CstmrDrctDbtInitn> XML message in it.

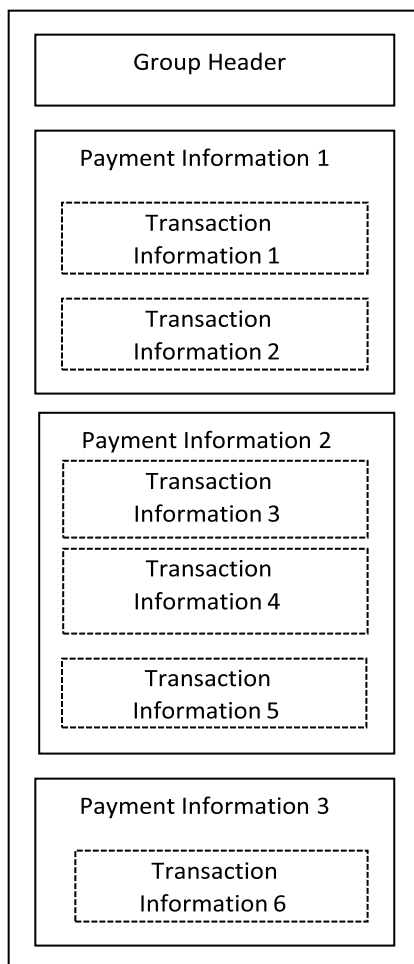

The message is composed of 3 building blocks:

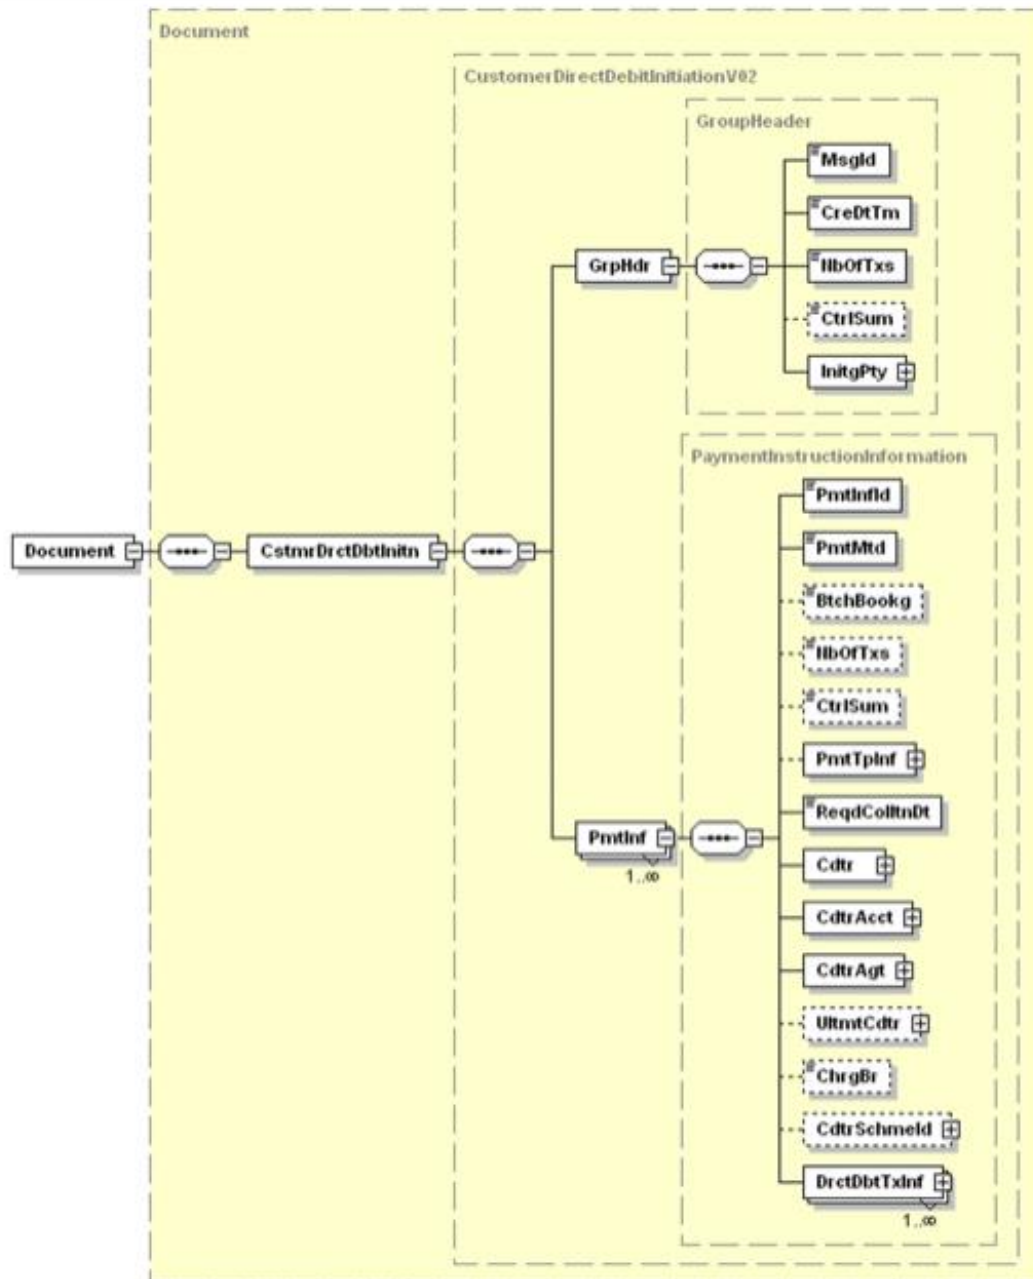

A. GroupHeader: This building block is mandatory and present once. It contains elements such as Message Identification, Creation Date And Time.

B. PaymentInformation: This building block is mandatory and repetitive. It contains, among other things, elements related to the Credit side of the transaction, such as Creditor and Payment Type Information.

C. DirectDebitTransactionInformation: This building block is mandatory and repetitive. It contains, among other things, elements related to the debit side of the transaction, such as Debtor and RemittanceInformation Rules.

A detailed view on the structure of a Direct Debit Initiation Message is presented in the figure below and in the following table.

Box with full-line is a **mandatory** Message Element

Box with full-line and dashed border is a **mandatory** Message Element

The Child Elements must appear in the **sequence** mentioned

Only one of the possible Child Elements may be present (choice)

B. Message Description

i. 1.0 GroupHeader

Definition: Set of characteristics shared by all individual transactions included in the message.

XML Tag: <GrpHdr>

Occurrences: [1..1]

Level: 1

Format: This message item is composed of the following elements.

Index	Occ.	Message item	XML TAG
1.1	[1..1]	++ MessageIdentification	<MsgId>
1.2	[1..1]	++ CreationDateTime	<CreDtTm>
1.6	[1..1]	++ NumberOfTransactions	<NbOfTxes>
1.7	[0..1]	++ ControlSum	<CtrlSum>
1.8	[1..1]	++ InitiatingParty	<InitgPty>

ii. 1.1 MessageIdentification

Definition: Point to point reference assigned by the instructing party and sent to the next party in the chain to unambiguously identify the message.

XML Tag: <MsgId>
Occurrences: [1..1]
Level: 2
Format: Max35Text
Usage: The instructing party has to make sure that “Message Identification” is unique per instructed party for a pre-agreed period.
Example: <MsgId>ABC/060928/DDT001</MsgId>

iii. 1.2 CreationDateTime

Definition: Date and time at which a (group of) payment instruction(s) was created by the instructing party.
XML Tag: <CreDtTm>
Occurrences: [1..1]
Level: 2
Format: YYYY-MM-DDThh:mm:ss
Example: <CreDtTm>2010-12-02T08:35:30</CreDtTm>

iv. 1.6 NumberOfTransactions

Definition: Number of individual transactions contained in the message.
XML Tag: <NbOfTx>
Occurrences: [1..1]
Level: 2
Format: Max15NumericText
Usage: It is recommended to use this field
Example: <NbOfTx>28</NbOfTx>

v. 1.7 ControlSum

Definition: Total of all individual amounts included in the message, irrespective of currencies.

XML Tag: <CtrlSum>

Occurrences: [0..1]

Level: 2

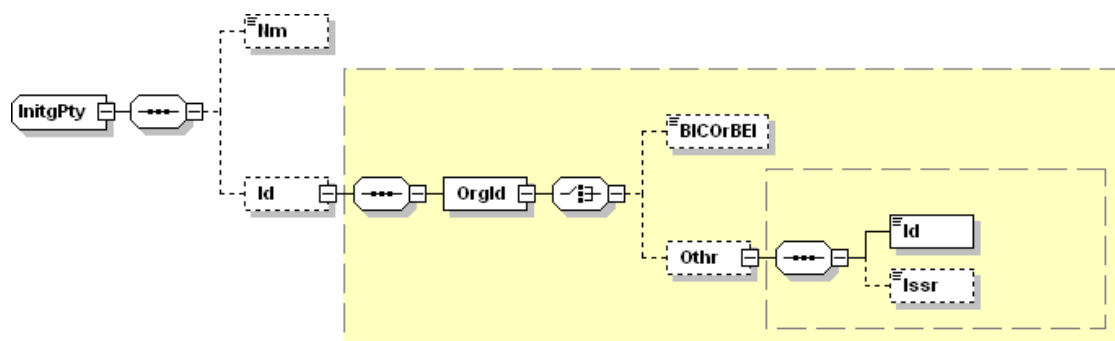

Format: Max. 18 digits of which 2 for the fractional part.

Decimal separator is “.”

Usage: It is recommended to use this field

Example: <CtrlSum>32.56</CtrlSum>

vi. 1.8 InitiatingParty

Definition: Party initiating the payment. In the Direct Debit context, this can be the creditor, or the party that initiates the payment on behalf of the creditor.

XML Tag: <InitgPty>

Occurrences: [1..1]

Format: This message item is composed of the following elements.

Occ.	Message item	XML TAG	Format
[0..1]	+++ Name	<Nm>	Max70Text
[0..1]	+++ Identification	<Id>	
[1..1]	++++ OrganisationIdentification	<OrgId>	
[0..1]{Or	+++++ BICOrBEI	<BICOrBEI>	ISO BIC format

[0..1] Or}	+++++ Other	<Othr>	
[1..1]	++++++ Identification	<Id>	Max35Text
[0..1]	++++++ Issuer	<Issr>	Max35Text

Usage:

- Either Name or Identification of the initiating party or both must be used. It's recommended to use the field "Name".
- For Luxembourg companies, Identification (within Other) shall contain for example the "VAT number" or RCS number; The issuer of this identification is not mandatory.
- No business control is applied on the field InitiatingParty.

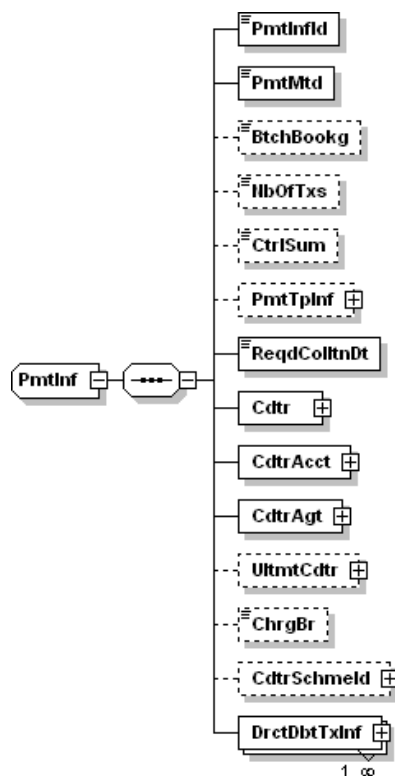

Example:

```

<InitgPty>
  <Nm>Luxcompany</Nm>
  <Id>
    <OrgId>
      <Othr>
        <Id>0123456789</Id>
        <Issr>RCS</Issr>
      </Othr>
    </OrgId>
  </Id>
</InitPty>

```

vii. 2.0 PaymentInformation

Definition: Set of characteristics that apply to the credit side of the Direct Debit transactions.

XML Tag: <PmtInf>

Occurrences: [1..n]

Level: 1

Format: This message item is composed of the following elements.

Index	Occ.	Message item	XML TAG
2.1	[1..1]	++ PaymentInformationIdentification	<PmtInfId>
2.2	[1..1]	++ Payment Method	<PmtMtd>
2.3	[0..1]	++ BatchBooking	<BtchBookg>
2.4	[0..1]	++ NumberOfTransactions	<NbOfTx>
2.5	[0..1]	++ ControlSum	<CtrlSum>

2.18	[1..1]	++ RequestedCollectionDate	<ReqdColltnDt>
2.19	[1..1]	++ Creditor	<Cdtr>
2.20	[1..1]	++ CreditorAccount	<CdtrAcct>
2.21	[1..1]	++ CreditorAgent	<CdtrAgt>
2.23	[0..1]	++ UltimateCreditor	<UltmtCdtr>
2.24	[1..1]	++ ChargeBearer	<ChrgBr>
2.27	[0..1]	++ CreditorSchemeldentification	<CdtrSchmld>
2.28	[1..n]	++ DirectDebitTransactionInformation	<DrctDbtTxInf>

viii. 2.1 PaymentInformationIdentification

PmtInflId

Definition: Reference assigned by a sending party to unambiguously identify the paymentinformation block within the message.

XML Tag: <PmtInflId>

Occurrences: [1..1]

Level: 2

Format: Max35Text

Example: <PmtInflId>ABC/1234/2010-09-25</PmtInflId>

ix. 2.2 PaymentMethod

PmtMtd

Definition: Specifies the means of payment that will be used to move the amount of money.

XML Tag: <PmtMtd>

Occurrences: [1..1]

Level: 2

Format: The following code must be used.

Code	Name	Definition
DD	Direct Debit	Collection of an amount of money from the debtor's bank account by the creditor. The amount of money and dates of collections may vary.

Example: <PmtMtd>DD</PmtMtd>

x. 2.3 BatchBooking

BtchBookg

Definition: Identifies whether a single entry per individual transaction or a batch entry for the sum of the amounts of all transactions in the group is required.

XML Tag: <BtchBookg>

Occurrences: [0..1]

SCOR	Structured Communication Reference	Document is a structured communication reference provided by the creditor to identify the referred transaction.

Values for Code not listed or not pre-agreed with the financial

institution are ignored Message Item **“Reference”**:

If used, the national standardized reference has to be filled in this field.

The Reference contains a 14 digit structured communication, with the last 2 digits as check digits (modulo 97) of the first 12 digits; but if the result is 0, then the check digits are 97.

Only Luxembourg banks support this national standardized reference.

Example:

```

<CdtrRefInf>
  <Tp>
    <CdOrPrtry>
      <Cd>SCOR</Cd>
    </CdOrPrtry>
  </Tp>
  <Ref>+++01234012401313+++</Ref>

Annexe 1 - Structure of the SEPA Creditor- ID in Luxembourg

Structure of the SEPA Creditor-ID in Luxembourg:

Example: LU27ZZZ0000000000123456789

Creditor ID

Position 1 and 2	Country Code:	“LU” (ISO 3166)
Position 3 and 4	Check Digit:	2n (ISO 7064)
Position 5 to 7	Business Code:	3AN; “ZZZ” (default)
Position 8	Fixed Value:	“0”
Position 9 to 26	National Identifier:	18AN

How to get a SEPA Creditor-ID?

1. The bank downloads the application form from the ABBL website:
<http://www.abbl.lu/banking-luxembourg-0>. (If the link is broken, you can use the search engine from the ABBL website with the tag: “Creditor-ID”).
2. The bank completes the form with all mandatory fields.
3. The bank sends the application form to the email address: cred-id@abbl.lu
4. The ABBL verifies the form (have all the required fields been completed? Is the BIC code valid?)
5. The ABBL verifies that the creditor has not **already** received a creditor identifier in Luxembourg.
6. The ABBL generates the SEPA Creditor ID and verifies its uniqueness.
7. In case there is a problem, the ABBL gets in touch with the bank in order to solve the issue.
8. The ABBL sends back the form completed with the SEPA Creditor-ID to the creditor bank.

Questions/Answers:

- Who is authorised to ask for a SEPA Creditor-ID?
 - Only creditor banks located in Luxembourg are authorised to ask ABBL for a SEPA Creditor-ID.
- Has the creditor to be located in Luxembourg?
 - No. The creditor may be located anywhere in a SEPA country.
- Is it possible to re-use an existing identifier?
 - Yes. It’s possible to re-use 18 characters of an existing identifier, which will be encapsulated in the SEPA Creditor-ID.
If the existing identifier is less than 18 characters, then the identifier is left padded with

“0” up to 18 characters.

- What is the other possibility to get an identifier?
 - If there is no reuse of any existing identifier, then an incremental SEPA Creditor-ID is generated, starting from “000000000000000001” to “999999999999999999”.
- Is there any verification on data sent by banks?
 - ABBL doesn’t make any verification on creditor’s data sent by a bank. Only the BIC8 of the creditor bank is verified through the SWIFT website.

About the ABBL

The ABBL is the largest professional association in the financial sector, representing the majority of financial institutions as well as regulated financial intermediaries and other professionals in Luxembourg, including law firms, consultancies, auditors, market infrastructures, e-money and payment institutions. This makes us truly representative of the diversity of the Luxembourg financial centre, placing us in a unique position, able to give the entire sector a voice at both national and international level.

We provide our members with the intelligence, resources and services they need to operate in a dynamic financial market and in an increasingly complex regulatory environment. We facilitate an open platform to discuss key industry issues and to define common positions for the entire sector.
